

Summer Learning

Maths

In our maths lessons we will begin our term by continuing to look at numbers up to 2 decimal places. This will involve partitioning, comparing and ordering.

Using our decimal knowledge we will then move on to money, learning how to convert between amounts, compare, estimate and calculate.

Then it's time to do...time! We will focus on converting between analogue and digital and converting to and from the 24 hour clock.

Shape will then be our next unit looking at identifying and comparing and ordering angles as well as symmetry.

Statistics will involve charts and line graphs before finishing off our year with co-ordinates and translations on a grid.

Throughout all our units, we will be applying our developing knowledge to reasoning and problem solving questions.

English

In our English lessons we will begin by using 'The Boy Who Biked The World'

Writing - We will be creating pieces of writing including a balanced argument, explanation texts, newspaper reports, poetry and descriptive writing.

SPAG - Our grammar lessons will be centred around possessive apostrophes, using the past tense and subordinate clauses.

Reading - we continue to develop our VIPERS skills using a variety of texts.

Religious Education

Easter

In this unit we will be introduced to accounts of the Resurrection of Christ in each of the four Gospels.

We will learn about the different reactions of people to the news that Christ was alive and study the story of the ascension.

Pentecost

In this unit we will learn about the story of Pentecost and the effects it had on the disciples. We will think about the missionary activity of the apostles and some prayers of the Holy Spirit.

Sharing in the life of Christ

In this unit, we will learn about the Universal Church established by the original teaching of the Apostles. We will reflect upon the Eucharist as the Sacrament which celebrates the Church's unity and think about religious customs from around the world.

Special roles and responsibilities

In this unit we will learn about the different tasks and responsibilities given to people in the Church to help us understand that the Church is Christ's body, made up of many different people.

Science

Living things and their habitats

In this unit we will explore a variety of ways to identify, sort, group and classify living things. We will learn how animals are split into 'vertebrates' and 'invertebrates' and begin to consider the differences between living things within these classifications. We will use and create classification keys to group, identify and name living things from the local habitat and beyond.

This unit also introduces the idea that environments are subject to human-made and natural changes, and that these changes can have a significant impact on living things. Here we will focus on the change to our local environment brought about by HS2.

Topic

Local History and Geography Study

In this unit we will study our home town of Leamington Spa, looking at it's location and placed which link closely to it. We will find out it's history, how it has changed over time and what makes it such a special place. Thinking ahead, we will also make logical predictions as to how it may change in the future.

Computing

Computer systems and network

We will understand the internet as a network of networks which need to be kept secure. We will learn that the World Wide Web is part of the internet, and will explore the World Wide Web for themselves in order to learn about who owns content and what they can access, add, and create. Finally, we will evaluate online content to decide how honest, accurate, or reliable it is, and understand the consequences of false information.

Creating media - Photo editing

Learners will develop their understanding of how digital images can be changed and edited, and how they can then be resaved and reused. They will consider the impact that editing images can have, and evaluate the effectiveness of their choices.
